Fill 3L jug 2 times and pour it in 5L jug.

3L jug will be remaining with 1 L. empty

5L jug and pour 1L from 3L jug to 5L jug

Fill 3L jug again and pour it in 5L jug

And 5L jug will now have 4L^{in 5L} jug. Thisis how you can ~~have~~ obtain 4L.

APPROACH: My Approach for this question is to first obtain 1L in 3L jug then and the pouring it in 5L jug then add 3L to 5L jug from 3L jug to obtain 4L in 5L jug
